INDEX TO VOL. XVII.

AIR, thermal conductivity of, an experimental determination of, 397.
Allen (J.), streamline and turbulent flow in open channels, 1081.
Aluminium-zinc alloys, X-ray study of, 433.
Andrade (Prof. E. N. da C.), a theory of the viscosity of liquids.—Part I., 497; Part II., 698.
Atomic spectral lines from a hydrogen discharge-tube, the relative intensities of, 33.
Backhurst (Ivor), the scattering of homogeneous X-rays of 0·25 to 0·4 Å., 321.
Bailey (Dr. V. A.) and Somerville (J. M.), the behaviour of electrons in nitric oxide, 1169.
Banerjee (S. S.) on the resonance frequency of oscillatory circuits with leaky condenser and its bearing on the measurement of the dielectric constant of ionized gas, 834.
Banerji (D.) and Bhattacharya (Dhiranjoy), deposits of elements by high-frequency discharge, 313.
Bartlett (A. C.), negative lengths of telephone line, 230; the calculation of modulation products.—II., 628.
Bateman (E. H.), the strain energy method in elastic network analysis: illustrated by an application to the portal frame, 1004.
Bates (Dr. L. F.), the resistance of manganese arsenide, 783.
Baudisch (Oskar) and Welo (Lars A.), ferromagnetism in the oxide obtained by dehydration of gamma ferric oxide hydrate, 753.
Baxter (A.), Cotton (F. W.), and Brentano (Dr. J.), photographic photometry based on scattering, 370.
Beevers (C. A.) and Lipson (H.), a rapid method for the summation of a two-dimensional Fourier series, 855.
Bhattacharya (Dhiranjoy) and Banerji (D.), deposits of elements by high-frequency discharges, 313.
Bickley (Dr. W. G.), the heavy elastica, 603.
Bircumshaw (Dr. L. L.), the surface tension of the lead-tin alloys, 181.
Blair (G. W. Scott) and Schofield (Dr. R. K.), the constancy of the viscosity of strong lithium chloride solutions at low velocity gradients, 225.
Books, new:—Prof. A. Hund's High Frequency Measurements, 316; Prof. E. L. Chaffee's Theory of Thermionic Vacuum Tubes, 317; Mr. F. Oldham's Thomas Young, F.R.S.: Philosopher and Physician, 318; Prof. Alexander Findlay's Introduction to Physical Chemistry, 318; Dr. Burington's Handbook of Mathematical Tables and Formulas, 319; Dr. L. J. Comrie's The Hollerith and Powers Tabulating Machines, 320; Sir Horace Lamb's Hydrodynamics, 518; Prof. T. Dantzig's Number, the Language of Science, 519; Dr. F. L. Arnot's Collision Processes in Gases, 520; Prof. E. Grimsehl's Text-book of Physics.—Vol. IV. Optics, 733; Mr. D. J. Martin's An Introduction to Thermodynamics for Chemists, 734; Dr. Ludwik Silberstein's Causality, 735; Mr. J. M. Child's Elements of Coordinate Geometry, 736; Dr. K. Hohenemser's Die Methoden zur angenäherten Lösung von Eigenwertproblemen

in der Elastokinetik, 859; Dr. M. J. O. Strutt's Lamésche, Mathieusche und verwandte Funktionen in Physik und Technik, 860; Dr. R. T. Beatty's Hearing in Man and Animals, 862; Sir W. H. Bragg and Prof. W. L. Bragg's The Crystalline State.—Vol. I. A General Survey, 863; Prof. E. W. Brown and Dr. D. Brouwer's Tables for the Development of the Disturbing Function, 1076; Prof. Victor Henri's Matière et Energie, 1076; Dr. S. O. Rawling's Infra-red Photography, 1077; Prof. Philipp Frank's Das Kausalgesetz und seine Grenzen, 1077; Prof. Frank Morley and Dr. F. V. Morley's Inversive Geometry, 1079; Prof. H. F. Baker's The Principles of Geometry. — Vol. V. Theory of Curves, 1189; Données numériques de Spectroscopie, rédigées par P. Auger, L. Bruninghaus, V. Henri, et F. Wolfers, 1191; Données numériques de physique du globe, rédigées par Ch. Mauriam, C. E. Brazier, L. Eble, H. Labrouste Ed. Salles, 1192; Données numériques d'électricité, magnétisme et électrochimie, rédigées par P. Auger, L. Durand, G. Foex, L. Néel, N. Marinesco, A. Schnorf, N. Thon, F. Wolfers, 1192.

Brentano (Dr. J.), Baxter (A.), and Cotton (F. W.), photographic photometry based on scattering, 370.

Brillouin's unified statistics, a modification of, 264.

Brown (W. L.), Cowan (H. McN.), and Emeléus (Dr. K. G.), negative sections of the cold-cathode glow discharge in helium, 146.

Boundary problems in mathematical physics, on the solution of, 987.

Buckley (H.) on the radiation from the inside of a circular cylinder, 576.

Cæsium vapour, the ionization of, by ultra-violet light, 483.

Carbon Kα, the components of, 544.

Cathode fall in the hydrogen arc, 830.

Cerous sulphate, the magnetic rotatory dispersion and the refraction of aqueous solutions of, 934.

Chalklin (Dr. F. C.) and Chalklin (Dr. L. P.), some measurements of the K-absorption edges of carbon, nitrogen, and oxygen, and of the components of carbon Kα, 544.

Chalklin (Dr. L. P.) and Chalklin (Dr. F. C.), some measurements of the K-absorption edges of carbon, nitrogen, and oxygen, and of the components of carbon Kα, 544.

Cold-cathode glow discharge in helium, negative sections of the, 146.

Collar (A. R.) and Duncan (Dr. W. J.), a method for the solution of oscillation problems by matrices, 865.

Colloidal propellants, the combustion of, 161.

Colorimetry with a spectrometer, 1047.

Commutator motors, note on the dynamical theory of, 844.

Copper oxide films, investigation of, by electron diffraction, 96.

Cotton (F. W.), Brentano (Dr. J.), and Baxter (A.), photographic photometry based on scattering, 370.

Cowan (H. McN.), Emeléus (Dr. K. G.), and Brown (W. L.), negative sections of the cold-cathode glow discharge in helium, 146.

Craxford (S. R.), Gatty (O.), and Philpot (J. St. L.), the theory of electrocapillarity. — Part II. The thermodynamics of capillarity, 54.

Crow (Dr. A. D.) and Grimshaw (W. E.), the combustion of colloidal propellants, 161.

Crystal lattices of silver, platinum, and zinc, the thermal expansion of, 113.

Datta (S.), studies in paramagnetism.—I. On the mechanism of quenching of orbital magnetic moment in paramagnetic ions of the iron group, 585; II. On the origin of the term "Δ" in paramagnetic salts, 1160.

David (Prof. W. T.) and Jordan (J.), flame temperatures in carbon monoxide and air mixtures, 172.

Davies (Dr. W.), the rate of heating of wires by surface combustion, 233.
Davison (Dr. Charles), the lunar periodicity of earthquakes, 737.
Deming (Dr. W. Edwards) on the application of least squares.—II., 804.
Deposits of elements by high-frequency discharge, 313.
Deuton and disintegration, 793.
——, note on the, 1023.
Dhar (Dr. S. C.) on the expansion of Mathieu functions in a series of Bessel functions, 1031.
Dielectric constant of ionized gas, measurement of, 834.
Dixit (K. R.), the inner potential of semi-conductors: a correction, 732.
Druyvesteyn (M. J.) and Warmoltz (N.), energy balance, electron temperature, and voltage gradient in the positive column in mixtures of Na vapour with Ne, He, and Ar, 1.
Duncan (Dr. W. J.) and Collar (A. R.), a method for the solution of oscillation problems by matrices, 865.
Earthquakes, the lunar periodicity of, 737.
Elastic extension of metal wires under longitudinal stress.—Part III. Theoretical, 634.
Elastica, the heavy, 603.
Electric oscillatory circuit, overtones and fundamental period of an, 192.
Electrical conductivity of aqueous solutions of sodium and potassium hydroxides—revised figures and the limiting mobility of the hydroxyl ion at 25°, 582.
Electrocapillarity, the theory of.—Part II. The thermodynamics of capillarity, 54.
Electrometric measurement of Röntgen energy, 1144.
Electron diffraction experiments with graphite and carbon surfaces, 457.
—— ——, investigation of copper oxide films by, 96.
—— ——, investigation of thin films of organic substances by, 201.
—— spin, the wave-statistical theory of, 993.
Electrons, experiments on the polarization of, 1058.
—— in nitric oxide, the behaviour of, 1169.
Emeléus (Dr. K. G.), Brown (W. L.), and Cowan (H. McN.), negative sections of the cold-cathode glow discharge in helium, 146.
Evans (Prof. E. J.) and Lavery (R. H.), the magneto-optical dispersion of isobutyl formate, methyl butyrate, and ethyl malonate in the ultra-violet region of the spectrum, 351.
—— and Thomas (W. Rheinallt), the Hall effect and some other physical constants of the tin-bismuth series of alloys, 65.
Ferromagnetism in the oxide obtained by dehydration of gamma ferric oxide hydrate, 753.
Flame temperatures in carbon monoxide and air mixtures, 172.
Fourier discontinuities: a chapter in historical integral calculus, 668.
—— series, two-dimensional, a rapid method for the summation of, 855.
"g," a stroboscopic jet method for determining, 282.
Gatty (O.), Philpot (J. St. L.), and Craxford (S. R.), the theory of electrocapillarity.—Part II. The thermodynamics of capillarity, 54.
Ghosh (M.) on the Hertzian impact of an elastic hammer on a damped pianoforte string, 521.
Goodier (Dr. J. N.), an analogy between the slow motions of a viscous fluid in two dimensions and systems of plane stress, 554; additional note, 800.
Graphite and carbon surfaces, electron diffraction experiments with, 457.
Gratias (Dr. O. A.), the half-value period of uranium II., 491.
Grimshaw (W. E.) and Crow (Dr. A. D.), the combustion of colloidal propellants, 161.
H_3, the two kinds of, 1025.
Hall effect and some other physical constants of the tin-bismuth series of alloys, 65.
Hallen (Erik), overtones and fundamental period of an electric oscillatory circuit, 192.

Harris (Sidon), measurement of ionic mobilities in the positive column, 131.
Heat conduction in a solid in contact with a well-stirred liquid, 849.
—— recuperator, on the problem of the, 914.
—— transfer, use of Oseen's approximation in problems of, 423.
Heating of wires by surface combustion, the rate of, 233.
Helium, ionization by collision in, 678.
Hertzian impact of an elastic hammer on a damped pianoforte string, 521.
Heterochromatic photometry, personal errors in, 660.
High-frequency discharge, deposits of elements by, 313.
High-speed jets of compressible fluid, oscillations in, 651.
Hooker (S. G.), oscillations in high-speed jets of compressible fluid, 651.
Houstoun (Dr. R. A.), colorimetry with a spectrometer, 1047.
Hydrogen arc, the cathode fall in, 830.
—— discharge-tube, the relative intensities of atomic spectral lines from, 33.
Iball (Dr. John) and Owen (Prof. E. A.), X-ray study of aluminium-zinc alloys, 433.
Immelman (M. N. S.), a determination of the radium content of some South African granites, 1038.
Ingram (W. H.) on the operability of a salient-pole alternator on an infinite bus, 271; note on the computation of the disturbed motion of a synchronous motor, 623; note on the dynamical theory of commutator motors, 844.
Inner potential of semi-conductors: a correction, 732.
Ionic mobilities in the positive column, 131.
Ionization by collision in helium, 678.
Ionized gas, measurement of the dielectric constant of, 834.
Jackson (Dr. W. W.), the relative intensities of atomic spectral lines from a hydrogen discharge-tube, 33.
Jeffery (Dr. G. H.) and Vogel (Dr. A. I.), revised figures for the electrical conductivity of aqueous solutions of sodium and potassium hydroxides and the limiting mobility of the hydroxyl ion at 25°, 582.
Jenkins (R. O.), electron diffraction experiments with graphite and carbon surfaces, 457.
Jordan (J.) and David (Prof. W. T.), flame temperatures in carbon monoxide and air mixtures, 172.
K-absorption edges of carbon, nitrogen, and oxygen, some measurements of, 544.
Kar (K. C.) and Mukherjee (K. K.), the wave-statistical theory of electron spin, 993.
Klatzow (Dr. L.) and McCallum (Dr. S. P.), deviations from Paschen's law, 291.
Kunz (Jakob), the ionization of cæsium vapour by ultra-violet light, 483.
Laminar flow of a viscous fluid with vanishing viscosity, 1150.
Larmor (Sir Joseph), the Fourier discontinuities: a chapter in historical integral calculus, 668.
Lavery (R. H.) and Evans (Prof. E. J.), the magneto-optical dispersion of isobutyl formate, methyl butyrate, and ethyl malonate in the ultra-violet region of the spectrum, 351.
Lead-tin alloys, the surface tension of the, 181.
Least squares, the application of.—II., 804.
Limburg (H.) and Waterman (N.), electrometric measurement of Röntgen energy, 1144.
Lindsay (R. B.), a modification of Brillouin's unified statistics, 264.
Lipson (H.) and Beevers (C. A.), a rapid method for the summation of a two-dimensional Fourier series, 855.
Liquid films, on the behaviour of, in a vibrating air column, 27.
Lowan (Arnold N.), heat conduction in a solid in contact with a well-stirred liquid, 849; on the problem of the heat recuperator,

914; on the operational treatment of certain mechanical and electrical problems, 1134.
Lunar periodicity of earthquakes, 737.
McCallum (Dr. S. P.) and Klatzow (Dr. L.), deviations from Paschen's law, 291.
—— and Townsend (Prof. J. S.), ionization by collision in helium, 678.
Madelung constants for some cubic lattices, 1058.
Magnetic rotatory dispersion and the refraction of aqueous solutions of cerous sulphate, 934.
Magneto-optical dispersion of organic liquids in the ultra-violet region of the spectrum—isobutyl formate, methyl butyrate, and ethyl malonate, 351.
Manganese arsenide, the resistance of, 783.
Manganous and ferric salts, the theory of the paramagnetic rotation and susceptibility in, 961.
Mathieu functions, on the expansion of, in a series of Bessel functions, 1031.
Matrices, a method for the solution of oscillation problems by, 865.
Meksyn (Dr. D.), a unified field theory.—I. Electromagnetic field, 99; II. Gravitation, 476.
Meniscus at the surface of a liquid, on the volume of.—Part III., 511.
Milverton (Dr. S. W.), an experimental determination of the thermal conductivity of air between 0° and 100°, 397.
Miyadzu (Prof. Atsushi), path and stability of a local vortex moving round a corner (second paper), 1010.
Models of the electric field and of the photon, 197.
Modulation products, the calculation of.—II., 628.
Molecular refractivity of sodium chloride, 1072.
Mukherjee (K. K.) and Kar (K. C.), the wave-statistical theory of electron spin, 993.
Murison (C. A.), investigation of copper oxide films by electron diffraction, 96; investigation of thin films of organic substances by electron diffraction, 201.
Na vapour, mixtures with Ne, He, and Ar, energy balance, electron temperature, and voltage gradient, 1.
Neufeld (Jacob) on the solution of boundary problems in mathematical physics, 987.
Newman (Prof. F. H.), the cathode fall in the hydrogen arc, 830; the molecular refractivity of sodium chloride, 1072.
Nickel, the structure of oxide films on, 466.
Nitric oxide, the behaviour of electrons in, 1169.
Nuclear changes in the atoms of radioactive substances, 1176.
Obituary Notice. — Prof. J. Joly, 198.
Operational treatment of certain mechanical and electrical problems, 1134.
Oscillation problems, a method of solution of, by matrices, 865.
Oscillations in high-speed jets of compressible fluid, 651.
Oseen's approximation in problems of heat transfer, use of, 423.
Overtones and fundamental period of an electric oscillatory circuit, 192.
Owen (Prof. E. A.) and Iball (Dr. John), X-ray study of aluminium-zinc alloys, 433.
—— and Yates (E. L.), the thermal expansion of the crystal lattices of silver, platinum, and zinc, 113.
Ozone, the distribution of atmospheric, 251.
Paramagnetic rotation and susceptibility in manganous and ferric salts, the theory of, 961.
Paramagnetism, studies in.—I. On the mechanism of quenching of orbital magnetic moment in paramagnetic ions of the iron group, 585; II. On the origin of the term "Δ" in paramagnetic salts, 1160.
Parthasarathy (S.), the Raman effect in the study of chemical reactions, 471.
Paschen's law, deviations from, 291.
Path and stability of a local vortex moving round a corner (second paper), 1010.
Penney (Dr. W. G.) and Van Vleck (Prof. J. H.), the theory of the

paramagnetic rotation and susceptibility in manganous and ferric salts, 961.
Philpot (J. St. L.), Craxford (S. R.), and Gatty (O.), the theory of electrocapillarity.—Part II. The thermodynamics of capillarity, 54.
Photographic photometry based on scattering, 370.
Pianoforte string, on the Hertzian impact of an elastic hammer on a damped, 521.
Pierce (I. T.), Roberts (Dr. R. W.), and Wallace (L. A.), the magnetic rotatory dispersion and the refraction of aqueous solutions of cerous sulphate, 934.
Piercy (Dr. N. A. V.) and Schmidt (Dr. R. J.), use of Oseen's approximation in problems of heat transfer, 423.
Polarization of electrons, experiments on the, 1058.
Portal frame, the strain energy method in elastic network analysis: an application to the, 1004.
Porter (Prof. Alfred W.) on the volume of the meniscus at the surface of a liquid.—Part III., 511.
Positive column in mixtures of Na vapour with Ne, He, and Ar, energy balance, electron temperature, and voltage gradient, 1.
—— ——, measurement of ionic mobilities in the, 131.
Preston (G. D.), the structure of oxide films on nickel, 466.
Radiation from the inside of a circular cylinder.—Part III., 576.
——, steady states produced by, with application to the distribution of atmospheric ozone, 251.
Radioactive substances, nuclear changes in the atoms of, 1176.
Radium content of some South African granites, a determination of the, 1038.
Raman effect for water in different states, 1113.
—— —— in the study of chemical reactions, 471.
Rao (Dr. I. Ramakrishna), Raman effect for water in different states, 1113.
Resonance frequency of oscillatory circuits with leaky condenser and its bearing on the measurement of the dielectric constant of ionized gas, 834.
Richardson (Dr. E. G.), the transport of silt by a stream, 769.
Roberts (Dr. R. W.), Pierce (I. T.), and Wallace (L. A.), the magnetic rotatory dispersion and the refraction of aqueous solutions of cerous sulphate, 934.
Robinson (N. W.) and Stephens (R. W. B.) on the behaviour of liquid films in a vibrating air column, 27.
Röntgen energy, electrometric measurement of, 1144.
Salient-pole alternator on an infinite bus, the operability of, 271.
Scattering of homogeneous X-rays of 0·25 to 0·4 Å., 321.
Schmidt (Dr. R. J.) and Piercy (Dr. N. A. V.), use of Oseen's approximation in problems of heat transfer, 423.
Schofield (Dr. R. K.) and Blair (G. W. Scott), the constancy of the viscosity of strong lithium chloride solutions at low velocity gradients, 225.
Silt, the transport of, by a stream, 769.
Somerville (J. M.) and Bailey (Dr. V. A.), the behaviour of electrons in nitric oxide, 1169.
South African granites, a determination of the radium content of some, 1038.
Specific heats of liquids, on the measurement of, by a cooling method, 297.
Squire (H. B.) on the laminar flow of a viscous fluid with vanishing viscosity, 1150.
Starr (A. T.), tapered loaded submarine cable, 83.
Statistics of positrons and electrons in equilibrium with radiation at high temperatures, 910.
Steady states produced by radiation with application to the distribution of atmospheric ozone, 251.
Stephens (R. W. B.) on the measurement of the specific heats of liquids by a cooling method, 297.
—— and Robinson (N. W.) on the behaviour of liquid films in a vibrating air column, 27.

Stiles (W. S.), yellow-blue ratio and personal errors in heterochromatic photometry, 660.
Strain energy method in elastic network analysis: illustrated by an application to the portal frame, 1004.
Streamline and turbulent flow in open channels, 1081.
Submarine cable, tapered loaded, 83.
Summation of a two-dimensional Fourier series, a rapid method for, 855.
Surface combustion, the rate of heating of wires by, 233.
—— tension of liquid metals of the lead-tin alloys, 181.
Synchronous motor, note on the computation of the disturbed motion of a, 623.
Telephone line, negative lengths of, 230.
Thermal conductivity of air between 0° and 100°, an experimental determination of, 397.
—— expansion of the crystal lattices of silver, platinum, and zinc, 113.
Thermodynamics of capillarity—the theory of electrocapillarity, 54.
Thin films of organic substances, investigation of, by electron diffraction, 201.
Thomas (W. Rheinallt) and Evans (Prof. E. J.), the Hall effect and some other physical constants of the tin-bismuth series of alloys, 65.
Thomson (Prof. G. P.), experiments on the polarization of electrons, 1058.
Thomson (Sir J. J.), note on the paper "On Models of the Electric Field and of the Photon," 197; the two kinds of H_3, 1025.
Tin-bismuth series of alloys, the Hall effect and some other physical constants, 65.
Townsend (Prof. J. S.) and MacCallum (S. P.), ionization by collision in helium, 678.
Transport of silt by a stream, 769.
Tyler (Dr. E.), a stroboscopic jet method for determining "g," 282.
Tyte (Dr. L. C.) on the elastic extension of metal wires under longitudinal stress.—Part III. Theoretical, 634.
Unified field theory.—I. Electromagnetic field, 99; II. Gravitation, 476.
Uranium II., the half-value period of, 491.
Van Vleck (Prof. J. H.) and Penney (Dr. W. G.), the theory of paramagnetic rotation and susceptibility in manganous and ferric salts, 961.
Viscosity of liquids, a theory of the.—Part I., 497; Part II., 698; additional note, 800.
—— of strong lithium chloride solutions at low velocity gradients, the constancy of, 225.
Viscous fluid, the slow motions of, in two dimensions and systems of plane stress, 554.
—— —— with vanishing viscosity, on the laminar flow of a, 1150.
Vogel (Dr. A. I.) and Jeffery (Dr. G. H.), revised figures for the electrical conductivity of aqueous solutions of sodium and potassium hydroxides and the limiting mobility of the hydroxyl ion at 25°, 582.
Vortex, local, moving round a corner, path and stability of a, 1010.
Walke (Harold J.), the deuton and disintegration, 793; note on the deuton and disintegration, 1023; nuclear changes in the atoms of radioactive substances, 1176.
Wallace (L. A.), Pierce (I. T.), and Roberts (Dr. R. W.), the magnetic rotatory dispersion and the refraction of aqueous solutions of cerous sulphate, 934.
Warmoltz (N.) and Druyvesteyn (M. J.), energy balance, electron temperature, and voltage gradient in the positive column of Na vapour with Ne, He, and Ar, 1.
Wataghin (G.), statistics of positrons and electrons in equilibrium with radiation at high temperatures, 910.
Waterman (N.) and Limburg (H.), electrometric measurement of Röntgen energy, 1144.
Wave-statistical theory of electron spin, 993.
Welo (Lars A.) and Baudisch (Oskar), ferromagnetism in the oxide obtained by dehydration of gamma ferric oxide hydrate, 753.

Wheeler (Dr. T. S.), the Madelung constants for some cubic lattices, 1058.
Wulf (Oliver R.), steady states produced by radiation with application to the distribution of atmospheric ozone, 251.
X-ray study of aluminium-zinc alloys, 433.
X-rays of 0·25 to 0·4 Å., the scattering of homogeneous, 321.
Yates (E. L.) and Owen (Prof. E. A.), the thermal expansion of the crystal lattices of silver, platinum, and zinc, 113.
Yellow-blue ratio and personal errors in heterochromatic photometry, 660.
